

Surgical Pathology Report

GI Associates of Boston | Dr. Elena Hartley, MD

Patient: Jane Doe | DOB: 1988-03-14 | MRN: 00142837

Accession: SP-2026-04837 Received: 2026-04-23 Reported: 2026-04-25

Pathologist: Dr. M. Patel, MD Clinical: Active UC, rule out dysplasia

SPECIMENS SUBMITTED

A: Rectal biopsy x4

B: Sigmoid biopsy x2

C: Descending colon junction biopsy x2

MICROSCOPIC DESCRIPTION

A (Rectum): Colonic mucosa with marked active chronic inflammation. Cryptitis present with multiple crypt abscesses. Crypt architectural distortion, branching, and shortening noted. Basal plasmacytosis. Goblet cell depletion. No granulomas. No dysplasia identified.

B (Sigmoid): Colonic mucosa with moderate active chronic inflammation. Focal cryptitis. Mild crypt distortion. No granulomas. No dysplasia.

C (Descending junction): Colonic mucosa with mild chronic inactive inflammation. Minimal architectural change. No active cryptitis. No dysplasia.

DIAGNOSIS

A: Active chronic colitis with crypt abscesses, consistent with active ulcerative colitis.

B: Chronic active colitis, moderate, consistent with ulcerative colitis.

C: Chronic inactive colitis, mild -transition zone.

No dysplasia identified in any specimen. No features of Crohn's disease.
